

Dinosaurian, the Evolution of Birds, and the Origin of Flight

Filesize: 4.34 MB

Reviews

*It in a single of the most popular ebook. It really is simplified but excitement in the fifty percent from the pdf. It is extremely difficult to leave it before concluding, once you begin to read the book.

GRIN Verlag Okt 2015, 2015. Taschenbuch. Book Condition: Neu. 210x148x1 mm. This item is printed on demand - Print on Demand Neuware - Scientific Essay from the year 2015 in the subject Earth Science / Geography - Palaeo-Ontology, , language: English, abstract: This paper deals with the evolution of flight in dinosaurs and describes the physical characteristics of cretaceous feathered dinosaurs. The author also deals with the hypothesis that the fossil record is probably not complete at present and that an animal very similar to Deinonychus gave rise to birds and then later to dromaeosaurs, including Deinonychus and Velociraptor. The animals which dominated the earth for over 150 million years are called dinosaurs. In them, you can see forms of every major group that ever lived, including birds. In a phylogenetic chart that further describes the evolutionary relations between organisms(e.g., dinosaurs), it's apparent to identify these animals in detail, step by step using physical features, that are evident in the anatomy of the closely related groups that exist among the Dinosauria. Those features that define larger groups are called primitive because they are thought to have evolved earlier, whereas features shared by smaller groups are called derived or advanced. Used in this way, the terms primitive and advanced are relative and do not imply that one feature is better than another. In our chart and cladogram, the character 'hole in the hip socket' defines the group dinosaurian, which contains all dinosaurs including birds. Within all vertebrates, having a hole in the hip socket is unique to the dinosaurian, and we say its derived with respect to all vertebrates. Cladistic analysis indicates that the fossil record is probably not complete and that an animal very similar to Deinonychus gave rise to birds and then later to dromaeosaurs, including Deinonychus and Velociraptor....
