At an early date Koch insisted on the value of a photographic record as a convincing proof of the reality and accuracy of the descriptions. For the most part, proof of this kind is no longer needed, but more and more has photography taken the place of the diagram or the drawing. It is in Bacteriology that illustration by photography is perhaps more satisfactory than in any other branch of pathology. Numerous are the excellent illustrations occurring in works on this subject, but these plates, even when not deprived of some of the excellence of the original negatives by the process of reproduction, are generally scattered and fragmentary records of particular appearances.
